

ADOPTION
CERTIFICATE

Name Surname

You're helping WWF to protect the future of penguins
and to tackle some of the biggest environmental
challenges facing our natural world today.

Thank you

This special gift is from Friend's name:

This certificate is a gift for you. I hope you like it.

The director of WWF Greece

Dimitris Karavellas

PENGUIN

THREATS

SEA ICE LOSS

Climate change is reducing the amount of sea ice in parts of the Antarctic Peninsula. One of the penguins main food sources - krill - breeds and feeds under the sea ice.

MORE SNOW

Adélie penguins only nest on bare, dry land and increased snowfall during late winter and early spring may cause chicks to hatch later. There's less krill around at this time of year, which can affect the chicks' chances of survival.

LOSS OF PREY

Overfishing of krill in parts of the Southern Ocean may also impact one of the penguins main food sources.

OUR WORK

We work with governments, industries and individuals to help reduce their greenhouse gas emissions. We encourage them to switch to renewable energy – to help minimise climate change and the warming that threatens penguins, their food sources and their habitat.
